How Can Investors Monitor The Trading Progress of The PAMM

20%

Investors

35%

3. How Can Investors Monitor the Trading Progress of the PAMM?

PAMM Investors can monitor their Investment accounts through the **PAMM Investor Portal**.

Since the Money Manager trades from a separate Trading account, Investors do not have access to real-time trading activity. However, the PAMM system synchronises with MetaTrader based on the scheduled Rollover, providing updated information including:

- Trading activity
- Profit distribution
- Fee payouts
- Money transfers
- Trading history

Profit allocation depends on the Rollover process and the system's synchronisation with MetaTrader. At Vantage Markets, two different Rollover modes are available for implementation.

Once the Rollover begins, the system will automatically calculate and distribute both floating and realised profit and/or loss.

For further assistance, please refer to the previous section or contact your designated account manager.

4. How Is Profit and Loss Distributed on Vantage PAMM?

Trade results are distributed between Investors and the Money Manager at each Rollover, according to their share in the PAMM account. Any additional fees in the trading platform are treated as a profit or loss and are also distributed between Investor and their Money Manager.

The distribution occurs incrementally at each Rollover for every trade. The amount to be distributed is calculated based on the difference between the current trade's profit and the profit from the same trade during the previous Rollover. Please refer to the example below for profit distribution on a single trade:

ROLLOVERS	INVESTMENT #1 \$10,000 (20%)	INVESTMENT #2 \$15,000 (30%)	INVESTMENT #3 \$25,000 (50%)
Rollover #1 profit =\$1,000	$\$1000 * 20\% = \200	$\$1000 * 30\% = \300	$\$1000 * 50\% = \500
Rollover #2 profit =\$1,500 (=\$500)	$\$500 * 20\% = \100	$\$500 * 30\% = \150	$\$500 * 50\% = \250
Rollover #3 \$800 (-\$700)	$\$-700 * 20\% = \140	$\$-700 * 30\% = \210	$\$-700 * 50\% = \350
Rollover #4 closed with profit of \$2,400 (+\$1,600)	$\$1600 * 20\% = +\320	$\$1600 * 30\% = +\480	$\$1600 * 50\% = +\800
Total For The Trade	$\$200 + \$100 - \$140 + \$320 = \$480$	$\$300 + \$150 - \$210 + \$480 = \$720$	$\$500 + \$250 - \$350 + \$800 = \$1200$
